# Cloud backup for large and fast-growing organizations

IDrive 360 is a cloud-based backup platform for enterprises and organizations that need a single-point solution for all their cloud backup, cloud storage, and data recovery needs. A unified console for managing backups of all business units, a centralized management console for monitoring and configuring account controls, scalable large cloud-storage plans, encrypted data security, account access controls, ransomware protection – the product is a consolidation of the critical features modern businesses need to manage an ever-growing data repository.

## A simplistic approach to multi-layered data management

In the digital era, businesses are dependent on data for operations, market research, customer service, customer retention, social media tracking, market strategizing, sales predictions, and business planning. Data is effectively a monetary asset that needs to be secure and accessible at all times to ensure smooth operations and avoid downtimes that impact sales and reputation. For this exact reason, data management is more crucial and complicated for enterprises that span multiple business units. IDrive 360 is designed to cater to this large-scale data management and recovery need with a simplistic approach that does not divert focus from the core business.

- One account to backup all the computers of the organization

- A single backup console; company and unit-level access controls

- A centralized management console for account-level IT monitoring

- Unlimited simultaneous backups across business units

- Scalable cloud storage plans and limitless device licenses

# IDrive® 360

## IDrive 360 features - For when you need data backup with speed, business recovery without delay

Run fast and unlimited simultaneous backups across business units without impacting your network bandwidth and core operations. Perform regular backups via IDrive 360 and ensure timely data protection against hardware failures and natural disasters with a high rate of recovery point objective.

### File backup

Backup all your computers to a single IDrive 360 account and create file-level recovery points for quick data accessibility anytime and from anywhere via the cloud.

### Automated backup

Effortlessly secure unlimited computers across the business units. Create department-level backup plans or groups and schedule unmanaged regular-backups.

### Security and access

Business data is 2-tier protected during transfer and at-rest via AES-256-encryption. Access authentications include IP-based login, two-step verification, and SSO.

### Storage efficiency

Cloud storage utilization is optimized using a combination of data compression and deduplication technology. Save overhead costs without compromising storage needs.

### File-level recovery

Restore critical files instantly from the cloud during disasters and hardware failures with an almost real-time objective, without impacting daily operations

### Point-in-time restore

IDrive 360 supports point-in-time recovery of the latest 30 versions, without affecting cloud storage quota. Data is protected against malware and corruption at all times.
